 Years of design: 2022 - 2023
 Diagrams: RG and Laura E Collins

Special symbols:

1

2

3

4

For a parrot with a light eye, start with the darker side up

Precrease the diagonals

Precrease to horizontal midline

Precrease and turn over horizontally

5

6

Fold up top layer. Repeat behind

7

Rotate in plane

8

Invert

9

10

Crimp

11

A chick!
Zoom on the head

12

Inside-reverse fold to make an eye stalk

A fish!
Precrease the bisector

Repeat on the back to form the rear eye stalk. Fold both eye stalks down

Fold tip-to-tip to mark point A at the edge. Unfold

Fold to the one-thirds line to mark point B. Lift the eye stalks up

Precrease precisely through AB. Point B should be slightly above the tip of the eye stalk

Double-inside-reverse fold along crease AB. See the next step for the back view: collapse along the indicated lines

Side view result

Fold down the nearest layer of the head. Repeat behind

Fold the eye down at the 1/3rds line

Squash-fold the eye

Invert the eye

Collapse on existing creases

Bisect the tail to make a mark at the edge

Fold the wing forward, extending the crease as shown in the next step

The crease line should demarcate the back segment slightly above the 1/2 mark. See inset.

Unfold to step 28

Fold wing forward as shown

Unfold to step 27

Lift up the wings

Zoom on the belly

Precrease two segments as shown, through all layers

Invert valleys to mountain folds on the top layer only

Bring the wing back down

Inside-reverse fold the tail

Inside-reverse the wing on existing creases

52

Tuck
point B
into the leg

53

54

View of the back leg.
Swivel-fold. The valley
crease line bisects
the little triangle

55

Inside-reverse fold
to narrow the claw

56

Inside-reverse the claw
through the middlemost
layer to point it down

67

Claw complete.
Zoom out

58

For the belly shaping steps
that follow, insert a finger between
the shoulder blades and use it as a counter support

59

60 (result)

Peel-away view:

Refold crease lines made in steps 36-37, which are labeled here as "y" and "w". As you do this, apex X should move towards the dorsal part of the animal and crease "a" should rise up and be hidden inside the model. See the next page for hints on effectuating this transition.

59a

Push first on the chest
and then on the abdomen
to start shaping
the ventral surface of the bird

59b

Use you thumb
to push up
under the abdomen,
as shown to remake
crease lines of steps 36-37

61

Crimp
the beak

62

The
parrot
is smiling
